

Description

MeCaSpray® is the pneumatic cartridge spray system for Castolin Eutectic's MeCaTec® series of polymer coatings. This self-contained spray system is portable and lightweight for ease of use and control. It integrates a dual stage trigger making one handed operation possible. The dual stage trigger allows atomizing air to flow to the nozzle first, before initiating material flow from the cartridge. Each two-component cartridge contains both resin and hardener, separated until ready to spray. This system provides precise mixing at the nozzle, when needed, avoiding waste and pot life concerns.

MeCaTec® product compatibility

MeCaSpray® equipment is used with MeCaWear® and MeCaCorr® cartridges. Each cartridge contains both Resin and Hardener.

- MeCaWear® 300 • MeCaWear® 350 • MeCaCorr® 700
- MeCaCorr® 710 • MeCaCorr® 750 • MeCaCorr® 780

Features & benefits

Features	Benefits
Lightweight Design	<ul style="list-style-type: none"> • Less worker fatigue • Easy to control
Dual Stage Trigger	<ul style="list-style-type: none"> • One handed operation made easy
Single Coat Application	<ul style="list-style-type: none"> • Lower intercoat porosity • Lower risk of intercoat failure • Faster return to service
2 Component Cartridge	<ul style="list-style-type: none"> • Easy to use • Easy reload • No pot life concerns • Minimum waste • Precise mixing ratios

Before applying MeCaTec® products, please refer to the Safety Data Sheet (SDS) which is available for download on www.castolin.com/msds-portal.
